EDUCATION

31/12/2021 – 15/07/2025 Hassan, India

Bachelor of Engineering in Information Science MALNAD COLLEGE OF ENGINEERING HASSAN

The major modules studied during this degree are:

- Linear Algebra
- Complexity Theory
- Discrete Mathematics
- Computability Theory
- Object-Oriented Programming
- Data Structures and Algorithms

Final Grade: 7.86/10 (2.07 in German grading system)

EXPERIENCE

25/07/2025 – Present Manipal, India

RESEARCH SCHOLAR MANIPAL INSTITUTE OF TECHNOLOGY, MANIPAL

- Conducted research on deepfake video detection.
- Achieved **98% accuracy** using LSTMs and Attention Mechanism.
- Designed & implemented real-time detection model for emerging deepfakes.
- Published research in peer viewed journal and preparing two conference papers.
- Enhanced the model to continuously learn from new data and make instant predictions.

15/10/2023 – 18/11/2023 Bangalore, India

SOFTWARE INTERN PRAKHYATH MACHINES AND MACHINE TOOLS PVT LTD

- Automated defect detection in watch hands during manufacturing.
- Improved detection **accuracy by 20%** and reduced the false positives.
- Closely observed stakeholder collaboration to define project requirement.
- Built a real-time object detection system using OpenCV and Raspberry Pi.
- Improved quality control by automating small component defect detection using image processing

10/02/2025 – 20/05/2025 Bangalore, India

SOFTWARE INTERN-2 CODANACCI TECHNOLOGIES

- Built a complete school website from scratch as a Python Full Stack Developer.
- Developed a Multilingual chatbot supporting 5 languages to assist diverse parents.
- Received the **Best Intern Award** for outstanding performance during my internship.
- Designed a parent dashboard for instant access to attendance, events and announcements.
- Implemented AI features that **automated 60%** of routine parent queries, reducing staff workload.
- Enhanced Parent-School **engagement by 40%** through an intuitive and responsive website design.

PROJECTS

College Canteen Management System | React.js, Django, Node.js, MySQL, Azure cloud

- Developed a user-friendly website for students and staffs that reduced **waiting time by 40%**.
- Enabled real-time order tracking using Firebase, improved overall customer satisfaction
- Also integrated sales analytics to ensure complete transaction transparency.
- Streamlined order processing, cutting service time from **15 to 8 minutes**.

AI Powered Red Eye Disease Detection Using CNN | Python, OpenCV, TensorFlow, CNN

- Designed a website for users to upload images and detect disease.
- Built AI model using CNN to detect red eye disease in **3 categories**.
- Achieved **97% accuracy** in automatically detecting red eye conditions.
- Facilitated real-time prediction of disease severity for immediate action.
- Published paper in International Journal of Scientific Development and Research.

Real-Time Deepfake Video Detection Using Multimodal ML | XceptionNet, OpenCV, PyTorch

- Developed deepfake video detector attaining **98% accuracy**.
- Processed 500+ videos, reducing manual verification time by 70%.
- Optimized detection of deepfakes by **20%** using multimodal analysis.
- Enabled live detection at 30+ Frames Per Second, providing instant threat alerts.

SKILLS

- | | | |
|------------|-------------------|----------------|
| • Python | • Java Script | • Git/ GitHub |
| • HTML/CSS | • SQL | • Docker |
| • React.js | • Azure Cloud | • Power BI |
| • Node.js | • CI/CD Pipelines | • AWS (basics) |

CERTIFICATIONS

- Azure AZ-900 – Microsoft
- Cybersecurity Professional – Coursera
- Network Support and Security – Cisco
- Soft Skills Development – NPTEL(IIT Kharagpur)
- Project Management Fundamentals -- Coursera
- Practical Cyber Security for Cyber Security Practitioners – NPTEL(IIT Madras)
